

Managing Risk Course

A 1-day course for construction team members who want to develop their understanding and performance of the management of risks in the construction industry

Aim and Target Audience

The aim of the course is to provide delegates with an understanding of the principles and practice of managing construction risks. This includes understanding the pre-requisites of managing risk in a construction business and effectively implementing risk management processes. The course is suitable for all people who are interested in improving the management of risk in construction businesses. For example, directors, project managers, commercial managers, site managers and quantity surveyors.

Objectives

At the end of the course delegates will:

1. understand the principles and practice of managing construction risks
2. have assessed their own readiness for the management of risk
3. appreciate the wide variety of construction risks and their sources
4. know how to record, analyse and manage construction risks
5. practise the implementation of these techniques in a workshop session.
