INTELLIGENT RAMS FOR CIVIL ENGINEERING

RAMSGen is a Welsh startup, founded by veteran Royal Engineers. We help British contractors create high-quality Safe Systems of Work using AI to automate the document drafting.

Our platform allows you to improve compliance and competitiveness by combining your pre-construction information with HSE best practice. The result is site-specific Risk Assessments and Method Statements in less than 30 minutes, without sacrificing technical detail.

Unlike templates, RAMSGen produces genuinely site-specific documents aligned to your scope, sequencing, and resources.

Why use RAMSGen?

- **Win More Tenders.** Deliver professional, branded, and site-specific RAMS that impress clients and procurement teams.
- **Reduce Overhead.** Cut document preparation time by up to 90%, allowing more time on delivery.
- **Improve Compliance.** Ensure every document meets HSE best practices with built-in approval gates, eSignatures, and digital worker sign-ons.

**Request a short demo
using one of your own jobs**

REVIEWS

CE Services

I thought it was extremely user friendly and a very simple process to produce a comprehensive RA.

AA Lifting Solutions

The RAMSGen tool is very helpful, especially when I am in a rush.

Connect Mechanical Solutions

Will definitely be using you in the future.
